

DOUBLE CERTIFICATION FSC and PEFC – 2019 ESTIMATION

January 2020

Various foresters in different parts of the world have chosen to use both FSC and PEFC certification for their forest management units to provide evidence for their sustainable forest management practices.

Statistically, it means that their respective certified forest area appears in both the PEFC and FSC statistics. This poses a challenge for the calculation of the total certified area in several countries and of the total global certified area: adding up FSC and PEFC certified forest area leads to inflated figures.

To solve this issue, PEFC and FSC decided in 2016 to provide mutually agreed estimates for the total global certified area. Estimates are published annually since that year. The overview below reflects the situation as of mid-2019.

In terms of total global certified forest area, 430 million ha were certified in mid-2019 – versus 424 by mid-2018. By mid-2019 FSC reported a total certified area of 200 million ha and PEFC of 325 million ha.

Currently, double certification exists in 33 countries (see table below). Compared to the same period in 2018, the double certified area has increased from 86 to 93 million ha (an increase of 8 per cent). This corresponds to 18 per cent of the total certified area.

Russia and Sweden are the countries registering the highest absolute growth in terms of double certified area.

Please note that the provided data only covers forest area certified by FSC or a PEFC-endorsed system, and not the areas certified by other schemes. The provided figures should be regarded as best estimates.
