Introduction

General

The PEFC product categories are a key element in the implementation of the PEFC chain of custody by certified organisations and certification bodies. They define the PEFC product groups to which the chain of custody is applied and the scope of the chain of custody certificate. When checking the validity of a PEFC claim on a PEFC certified product, companies use the PEFC database to ensure the product is under the scope of their certified supplier.

Additionally, the categories serve as a tool for the promotion of certified products, with the list of product categories covered by a certified organisation available on the PEFC International website search engine.

Previously, the PEFC product categories were used on an informative basis, to keep track of the certified products produced by a certified company. In the current version (PEFC ST 2003:2020) of the PEFC chain of custody standards, the requirements for the scope of chain of custody certificates are harmonized, requiring certification bodies to include, under the certificate scope, the products covered by the chain of custody according to the PEFC product categories (see PEFC ST 2003:2020, requirement 7.7.2.d).

To update the list of product categories and provide an accurate description of the range of certified products made from forest or tree-based material, PEFC has revised the product categories, based on feedback received from different stakeholders.

Main changes

• The list of categories has been extended to cover more products.

• Any category that existed in the previous version of the list has been maintained, either with the same name, or covered under a new name.

• The new 2021 category codes use 6 digits (instead of 5). The main structure of the list of PEFC product categories remains the same. It is defined by a unique numeric code and the name of the corresponding category.

• The categories are still structured in three hierarchical levels from level 1 to 3. Product must always be reported using the most detailed level available.

Implementation

This list is to be used for any certificates issued against the 2020 versions of the chain of custody standards, to define the scope of the certificate.

For certificates issued against the previous versions of the PEFC chain of custody standards, the product information has automatically been transferred to the equivalent new categories in the PEFC International database. Certification bodies shall revise the products during the upcoming annual audits.
