Helping each other deliver on our GOALS.

PEFC ANNUAL REVIEW 2022
The PEFC Members Meeting in May in Dublin, Ireland, was the first reunion of the PEFC Alliance after two years of travel restrictions and social distancing. We were delighted to see our members, stakeholders, and partners again for a week of exchange, discussions, and new inspirations.

Part of the PEFC Members Meeting in Dublin was the Stakeholder Dialogue ‘Mitigating Climate Change: Win with Wood’. The event saw inspiring speeches and informed discussions about the enormous potential of sustainable timber in combatting climate change from speakers from a range of sectors, trading in or using wood-based products.

The regional forest management system for the Western Balkans achieved PEFC endorsement. Developed by our members for Bosnia and Herzegovina, North Macedonia and Slovenia, it is the second regional system to achieve PEFC endorsement.

Endorsements

Photography

13 of our members called on professional and amateur photographers to take part in our 2022 Experience Forests, Experience PEFC Photo Contest. We received 7500 photos showing life, work, and play in the forest. First prize went to Beate Magedin for her image ‘Small Woods in a Big Forest’, taken in Sweden.
NEW CEO

The PEFC International Board appointed Michael Berger as Secretary General/CEO. Michael has worked at PEFC since 2011, and has over twenty years of experience in environmental and quality management, sustainable supply chain development, and management systems.

Together with the World Architecture Festival, we awarded the Best Use of Certified Timber Prize, rewarding architects for their use of certified timber in outstanding buildings. The prize went to OHLAB for the residential building Paseo Mallorca 15, a calm and green oasis in the heart of Palma de Mallorca, Spain.

CONFLICT TIMBER

After the Russian invasion of Ukraine in spring 2022, the PEFC International Board clarified that all timber originating from Russia and Belarus is considered conflict timber. It therefore cannot be used in PEFC-certified products. The national systems for Belarus and Russia have been suspended in mutual agreement.

PEFC WEEK

November saw PEFC Week 2022 and our 27th General Assembly. The PEFC Alliance was united virtually for updates, discussions, and important decisions. We welcomed Eva Müller and Scott Robertson to the PEFC International Board, and elected Suzette Weeding as Vice Chair.
Moving forward together – innovation and collaboration within PEFC

Strengthening the system through innovation

We work to accelerate the uptake of forest certification globally through the innovation of our standards and requirements. In 2022, a new standard and two guidance documents were in the centre of our work.

A new guidance and standard

In 2022 we published the revised GD 2001, Chain of Custody of Forest and Tree Based Products and Related Standards – Guidance for Use. The guidance document provides information for the implementation of the requirements in all three chain of custody related standards. It is easy to navigate and concentrates any additional information issued by PEFC for the implementation of these three standards in one single document. It also intends to be our first “living document”, updated regularly, for example, when new clarification and interpretations are issued.

A new standard, ST 1004 Requirements for Certification Bodies operating Certification, went for public consultation at the end of 2022. It sets the requirements for certification bodies carrying out PEFC forest management certification. A hybrid between a Benchmark and International standard, it includes benchmark requirements to be further developed at national level, respecting our precious bottom-up approach. At the same time, it includes requirements that certification bodies shall directly implement, helping to harmonise the operation of PEFC certification worldwide.

Complying with the EU’s revised Renewable Energy Directive (RED II)

PEFC has applied to the European Commission to be recognised as a sustainability certification under the European Union’s (EU) RED II.

The Directive establishes sustainability requirements for forestry feedstocks and greenhouse gas criteria for biomass fuels that companies in the energy sector must comply with to be eligible for financial support by public authorities. PEFC’s recognition scope covers forest- and tree-based material, including recycled material and biomass fuels made of this material.

To align with RED II, we are developing a technical document, GD 2002, Interpretations and supplements to PEFC standards. The document can be implemented by chain of custody certificate holders wishing to extend the scope of their certification to show compliance with RED II requirements.
Better together – new developments and partnerships

We work to establish new partnerships and strong regional collaboration between our members and partners. 2022 saw innovation in Central Africa and new collaborations in Southeast Europe.

A sustainable first in the Congo Basin

The regional system for the Congo Basin is driving innovation within PEFC. It is the first forest management system to include requirements related to the mapping of the carbon stock in a forest, and assessments of greenhouse gas emissions linked to forestry operations.

Born during the standard development process, the innovative requirements are a response to the new expectations that companies and forest owners are facing.

Forestry and environment consulting firm TEREA, supported by PEFC and the PPECF (Programme de Promotion de l’Exploitation Certifiée des Forêts), developed a methodology to map the carbon stock in a forest and an audit tool for greenhouse gas emissions, to help forestry companies meet the two requirements.

The regional system was developed by our members PAFC-Congo, PAFC Cameroon and PAFC Gabon under the lead of our international stakeholder member ATIBT, cooperating on the development of the PAFC Congo Basin certification system.

Our work in the Congo Basin was also the focus of our presentations at the 2022 United Nations Climate Change Conference (COP 27) in Egypt. PEFC International and PAFC Gabon highlighted the potential of sustainable forest management for sustainable development and the mitigation of climate change in the Congo Basin and beyond.

Regional collaborations on the rise

In 2022, another regional system achieved PEFC certification: the Balkan Forest Certification Scheme. Our national members for Bosnia and Herzegovina, North Macedonia, and Slovenia developed the system together, sharing resources and knowledge, and maximising their visibility in the region. The PEFC national member for Bulgaria and future member for Croatia have declared their interest in joining the regional system.
Timber is becoming increasingly popular as a construction material, embraced by the architecture community for its versatility, flexibility and sustainability. Developments in engineered timber have pushed the boundaries of what is possible, allowing to build faster, higher and safer with timber.

To ensure that this increased demand for wood is not to the detriment of forest health, we promote the use of certified timber in construction.

In 2022, we continued our partnership with the World Architecture Festival and awarded the Best Use of Certified Timber Prize for the fourth time. The Prize recognises architects for their use of certified timber as a key element in outstanding projects.

The award went to Paseo Mallorca 15, designed by OHLAB. The residential building in Palma de Mallorca, Spain, has sustainability and energy efficiency at heart. The striking façade of PEFC-certified wooden slats plays with the light and shade, giving the building a special atmosphere.

In addition to the winning project, the jury honoured the Växjö Town Hall and Train Station by SWECO with a highly commended prize.

Our national members help us spread the word, reaching out to the architecture community in their countries. Projects around the globe showcase the enormous potential of timber construction. From healthy indoor climates to prefabrication and the ability to dismantle and relocate buildings, they offer a glimpse of a new era of construction.

"It is inspiring to see how construction with certified timber is developing. What were still dreams of the future just a few years ago is now a reality." 

Fabienne Sinclair, Head of Marketing, PEFC International

Today, sustainability is critical across all industry sectors. Products need to be produced in a manner that respects people and the planet, rather than contributing to climate change and deforestation, or resulting in poor working conditions. Forest-based products have an important role to play as the world moves away from fossil-based materials. At PEFC, we work with several sectors to increase their use of certified, forest-based materials for the benefit of our planet, whilst also helping industries reach their sustainability targets.

Helping each other reach higher – enhancing collaboration with sectors and partners

Outreach and engagement with the market

Designing the future with sustainable timber

“Our Three Rs campaign of renewable, responsibly sourced, and recycled packaging, helps protect our forests, promotes fair labour practices, and moves us closer to a more sustainable future for our forests.”

Jon Horton, Market Engagement Manager, PEFC International

Renewable, recyclable, responsible packaging

Moving away from fossil-based materials such as plastics is an important step in making our world more sustainable. Wood-based recyclable packaging can play a major role in this effort, but we must ensure that it never comes at the expense of forests.

As one of the largest consumers of wood, the paper and packaging industry has a special role to play in using our forests sustainably. Together with our members and partners in the packaging sector, we work to raise awareness for the enormous potential of sustainable paper packaging within the circular economy.

Our approach to Responsible Packaging brings together the three Rs – Renewable, Responsibly Sourced, and Recycled.

This approach combines sustainable forest management with safe working conditions and respect for human rights along the supply chain. Recycled materials help reduce the productive demand on forests, contributing to a responsible packaging solution.

Joining forces to make a difference

We teamed up with several of our national members and partners, companies and stakeholders, to encourage the use of PEFC-certified materials in packaging and promoting circular economy principles while reducing waste.

Through a range of resources, including events, webinars and case studies, we spread the message about responsible packaging practices, driving positive change in the industry. By adopting this responsible approach to packaging, we can contribute to the long-term health and viability of our forests and the planet as a whole.

Join us! Contact us at packaging@pefc.org

Raising the bar for furniture sustainability

With increased awareness for sustainability around the world, demand for wooden furniture is on the rise. At PEFC, we are convinced that using forest-based materials and forest protection can go hand in hand.

Join us! Contact us at furniture@pefc.org

Access free training and learn more about certified wooden furniture: furniture.pefc.org/training

Watch the webinar on carbon storage in wooden furniture: treee.es/CarbonWebinar

Join ‘Forests Are Home’

An important part of our work is to highlight the sustainability stories of certified companies and PEFC ambassadors. Do you manufacture and sell PEFC-certified wooden furniture? Let’s raise awareness for sustainable furniture together!

Our cooperation with the ASEAN Furniture Industry Council (AFIC), which started in 2021, has made great progress in 2022. Together we foster connections with PEFC-certified companies in the ASEAN region, helping them build wood sourcing policies, and raising awareness of sustainability in the furniture industry.

We continued our work with Italian High School ENAIP Tesero on a four-year education programme covering sustainability in the wood supply chain – from the protection and management of forest ecosystems to the traceability and legality of wood.

In a PEFC webinar, Dr. Francesco Negro, carbon storage expert from the University of Torino, explained the process of carbon storage in wooden furniture and how to calculate the amount that is stored. Due to the large interest in the topic, we will launch a Carbon Storage Calculation Project in 2023. The project helps companies calculate the carbon stored in wooden furniture products, providing useful information for life cycle assessments or sustainability reports. Stay tuned!

Continuing our successful collaborations in 2022

We are bringing wood suppliers and furniture manufacturers together to work towards a sustainable furniture industry and a bright future for the world’s forests. 15 national members, representing over 51 million hectares of certified forests, and thousands of furniture manufacturers and retailers have joined our effort.

“One simple step we can all take to help keep forests as forests is to choose PEFC-certified wooden furniture.”

Huong Maggi, Marketing Officer, PEFC International
Forest fibres for a sustainable fashion industry

As consumers become increasingly aware of the negative environmental impact that fashion can have, the demand for sustainable fashion is rising. Choosing fibres from sustainably managed forests appeals to eco-conscious consumers and is a big positive step businesses can take towards climate action.

Man-made cellulosic fibres (MMCF) consume relatively low levels of water and energy. If they come from a sustainable source, they even help safeguard our forests.

In 2022, we continued to raise awareness for this innovative solution and the benefits it brings to companies and our planet, together with our members and various partners in the textile sector.

We were honoured to be among the principal industry experts to provide input into the first edition of the *Global Fashion Agenda (GFA) Monitor*, a new report to guide fashion leaders towards a net positive fashion industry. Released as part of the *Global Fashion Summit* in Copenhagen, the report fosters collaboration on sustainability in fashion to accelerate impact.

At a brunch co-hosted with GFA, we welcomed GFA Monitor impact partners to discuss how our shared guidelines and actions can help the industry move towards sustainable fashion.

2022 marked the first year of our partnership with the *Textile and Fashion Federation (TaFF)*. At the centre of our work was the promotion of responsible sourcing, driving awareness of the importance of choosing legal and sustainable materials. The second phase of the partnership, which started in December, will introduce sustainability aspects in the forestry supply chain relevant to the fashion industry, including natural rubber and packaging, and explore collaborations with PEFC members.

*“Throughout the year, we have witnessed several fashion brands and retailers making concrete public commitments towards sourcing MMCF from sustainably managed forests. This is an exciting development.”*  
*Julia Kozlik*, Marketing Manager, PEFC International

Join us! Work with us on promoting forest fibres from sustainably managed forests.

Contact us at textile@pefc.org
Upgrading the natural rubber sector

Natural rubber is a highly versatile resource whose utility is matched by few other materials. It is present in over 40,000 products, in some of which even synthetic rubber cannot be used as a substitute. While natural rubber is essential to modern life, it also has a role to play in safeguarding our forests and the livelihoods of millions of smallholders.

Join us!

In partnership with rubber stakeholders at local and national levels, we have laid the foundation to empower and upskill these smallholder communities. We are now looking for partner organisations and companies to work with us on scaling group certification that enables quality assurance and quality control, and results in an improvement of the livelihoods of rubber smallholders. If you are interested, please contact shawn.goh@pefc.org.

Intensifying collaborations in 2022

The World Rubber Summit gathers industry leaders, experts, and government representatives with the aim of advancing a more inclusive and sustainable rubber sector. We joined forces with the summit organiser International Rubber Study Group (IRSG) to contribute to that goal by expanding the tools and support available to rubber smallholders and corporations around the world. The summit saw the announcement of our new memorandum of understanding with IRSG, agreeing on an even closer collaboration.

Since 2010, our Smallholder Group Certification programme has facilitated cooperation amongst family forest owners, community forest groups, and Indigenous Peoples in implementing sustainable forest management and pursuing forest certification. Within this programme, we held a series of webinars, in which our members from Thailand, Vietnam, Finland, Germany and Spain shared knowledge and experience on group certification for smallholders, including rubber producers.

Watch the webinar recordings: treee.es/GroupCertWebinars

To learn more about sustainable natural rubber, visit rubber.pefc.org.
2022 marked the second year of the collaboration between our PEFC FOR-TRADE project and the UN-REDD Initiative: Promoting Sustainable Forest Trade in the Lower Mekong Region (SFT-LMR).

SFT-LMR aims to reduce pressure on forests through improved governance in Cambodia, Laos, Myanmar, Thailand, and Vietnam. In 2022, we continued working towards this aim, with positive results in several areas.

Important steps were made in Cambodia and Laos towards establishing national forest certification systems, while our national members for Vietnam and Thailand made significant improvements in their governance mechanisms.

Chain of custody certification became a focus in the second year of the SFT-LMR initiative. The growing interest was reflected in the number of companies moving actively forward to obtain certification. The initiative also supported the development of our Due Diligence System (DDS) toolkits, improving traceability and minimising the risk of timber products from controversial sources entering supply chains, which is central to developing responsible and sustainable trade in the ASEAN region.

Finally, communications played an important role, and we continued to share news, best practices, and market linkages between supply chain actors, focusing on the rubber and furniture sectors.

The PEFC FOR-TRADE programme stands for Forestry and Trade for Development in the ASEAN region. It works to strengthen trade through the institutionalisation of forest certification infrastructure, and to enhance the development of national forest certification systems in Southeast Asia.
Helping actors become ambassadors

We are reaching out and giving the word to the people on the ground, to hear what forests and certification mean to them, making people and companies around the world our ambassadors for sustainability and forest certification.

Hearing from photographers and forest lovers

The 2022 edition of our Experience Forests, Experience PEFC Photo Contest brought us wonderful forest photos and inspiring stories from photographers around the globe.

13 countries, 7,500 photos, 1 winner

First prize went to Beate Magedin from Sweden for her photo 'Small Woods in a Big Forest.' The photo shows an unusual perspective of the forest, putting the often-overlooked details in the spotlight.

“Most people photograph either the complete landscape or the macro world. I do something in between,” she explained.

The winning photo was announced in an online session on Facebook Live. We discussed the photos in the finals with photographer Lukas Prins, helping the audience to see them through the eyes of a professional, and discover even more details. We also heard from the winner herself, who took us to a wonderful Swedish forest and shared how her winning photo came about.

Besides giving us gorgeous forest photos, the annual photo contest is a chance to hear from forest lovers around the world. The 12 finalists shared the stories behind their photos, forestry in their countries and what the forest means to them.

There are still many myths and misconceptions about forests and forest products, making consumers hesitant of buying wooden furniture, using paper packaging, or building their homes in timber.

For International Day of Forests, we rectified the most prevalent myths about forests and forest products, celebrating the many known and lesser-known uses of forest products, and raising awareness for the enormous potential of sustainable timber.

Giving the word to rural women

For International Day of Rural Women, we highlighted the work of women in forestry. But rather than speaking about those women, we gave the word to them.

Female forest owners and managers, forestry researchers and teachers told us about their daily work and what makes them passionate about forests.

In a series of interviews, they took us back into their childhood, when they first became interested in forestry, shared how their jobs have changed over time, and how certification is making a difference.

Women still face discrimination when it comes to land and livestock ownership, equal pay, and participation in decision-making entities – also in the forestry sector. Empowering them is critical in the fight against extreme poverty, hunger, and malnutrition.

Debunking myths on International Day of Forests

Do timber buildings burn easily?
Do trees release their stored timber once they are felled?

Trees absorb CO2 and store it as carbon in their biomass, where it stays, even after the trees have been harvested.

PAPER IS BAD FOR THE ENVIRONMENT

Paper comes from wood, a natural and renewable material. The CO2 absorbed by the tree is also stored in the paper.

TIMBER BUILDINGS ARE NOT FIRE SAFE

Timber buildings can be designed to withstand fire for over 120 minutes.

Discover their stories: pefc.org/rural-women
PEFC meets in Brussels

PEFC members from around the world gathered in the Belgian and EU capital in September to progress our work at the level of the Board and regional and thematic working groups. The week held inspiring discussions and productive meetings among PEFC members and with EU actors.

With the message of the week: “PEFC is here to support”, this was also an opportunity for our Board of Directors to meet the representatives of the European Commission and the European Parliament, and exchange on ongoing topics related to sustainable forests.

A new Working Group for EU-related matters

The week in Brussels was also the opportunity for the first meeting of our EU affairs Working Group, which was established in April 2022. Aiming to support our efforts at EU level, the new PEFC platform will closely look at EU policy developments and processes impacting our system, and exchange on key EU priorities.

Engagement at EU level for a collective impact

To amplify our collective impact in safeguarding the EU’s and the world’s forests, PEFC partners with a wide range of stakeholders. We strongly believe that increased engagement with EU institutions and stakeholder representatives can bring us a step closer to our common goals.

The work of the European Commission and applicable EU legislation impacts PEFC’s standard-setting. Thanks to PEFC’s readiness to adapt and contribute to the solution, our certification already acts as an important part of the EU forest toolbox. We will continue to work towards providing an improved understanding of PEFC’s role and the value voluntary forest certification has in supporting the EU policy objectives on the ground – as a multiplier to help give the EU legislation an impact beyond the EU, but also as a strong believer in dialogue and consensus.
How PEFC meets best practice

Trust in the PEFC label is key to our work. To ensure that everyone, from foresters to consumers, has confidence in our label, PEFC is regularly evaluated both through self-assessments and by independent third parties.

In 2022, we undertook a self-assessment against the Accountability Framework, with input received from the Accountability Framework initiative (AFi), a collaborative effort to build and scale up ethical supply chains for agricultural and forestry products.

In 2019, the AFi launched the Accountability Framework, a set of common principles, definitions, and guidance to support companies in addressing deforestation, conversion, and human rights impacts of supply chains.

The assessment found that PEFC is generally aligned with the Accountability Framework on the topics related to no-deforestation, respecting all human rights, and respect for the rights of indigenous peoples, local communities, and workers.

Other notable external recognitions include:

- The Consumer Goods Forum (CGF), whose Pulp, Paper, and Fibre-based Packaging (PPP) Roadmap highlights the role of certification systems such as PEFC as a key tool to combat deforestation.
- The Climate Bonds Initiative, whose “Forestry Criteria” lay out the requirements that forestry infrastructure assets or projects must meet to be included in a Certified Climate Bond. PEFC certification is accepted as eligible to demonstrate compliance with the ‘Forestry Criteria’.
- The Sustainable Development Goals (SDGs), which recognise PEFC as an official indicator towards SDG Indicator 15.2.1 – Progress towards sustainable forest management.
- The ASEAN Guidelines on Promoting Responsible Investment in Food, Agriculture and Forestry (ASEAN RAI), with the report “Mapping of Industry and Investment Standards and Principles to the ASEAN RAI”, gives PEFC the highest ranking (9.5 out of 10 points) in the assessment against the ASEAN RAI Guidelines.

“Trust in the PEFC label is key to our work. To ensure that everyone, from foresters to consumers, has confidence in our label, PEFC is regularly evaluated both through self-assessments and by independent third parties.”

Thorsten Arndt, Head of Communications, PEFC International
PEFC membership
Statistics, facts & figures

288 million hectares of forests globally are PEFC-certified

2022 saw large increases of certified forest area in Africa, Asia and Oceania, and small decreases in America and Europe. The most notable change of certified area occurred due to the suspension of the PEFC systems for Russia and Belarus, following the Russian invasion of Ukraine, leading to a loss of 39 million certified hectares in both countries together.

Asia saw a large increase of PEFC-certified area growing by 20% to nearly 17 million hectares. Malaysia, Republic of Korea, and Vietnam had the biggest increase on the continent. Only four years after we celebrated the first PEFC-certified hectares in Africa, the area grew by 29% to 290,000 hectares, thanks to large increases in certified area in Gabon.

750,000 forest owners are PEFC-certified globally

7 countries are revising or expanding their PEFC systems

PEFC-certified forest area per country (as of 31 December 2022)

Total: 288,154,245 hectares
More than **20,000** companies in the world benefit from PEFC’s chain of custody certification

PEFC has **29** international stakeholder members around the world

PEFC chain of custody certificates per country (as of 31 December 2022)

Total: **12,526** chain of custody certificates
